WHO Guideline for Management of Possible Serious Bacterial Infection (PSBI) in neonates and young infants where referral is not feasible

Department of Maternal, Newborn, Child & Adolescent Health
Newborn Infections

PROBLEM:

- Newborn infections cause a quarter of neonatal deaths
- Recommended treatment can be given only in hospitals
- Hospitalization is not an option for many sick young infants in LMICs
How common is Possible Serious Bacterial Infection (PSBI)?

2012 systematic review and meta-analysis reported

- Estimated 6.9 million cases of PSBI occurred
  - 3.4 million cases in South Asia
  - 2.6 million in sub-Saharan Africa
  - 0.8 million in Latin America

- PSBI case fatality ratio (CFR) was 9.8%

- PSBI incidence risk was 7.6% (95% CI 6-1-9.2)

Seale A et al Lancet Global Health 2014
Referral is not accepted for PSBI: 68-98%

- Hospital treatment - not accessible at all or in time in resource limited settings
- In some settings majority of families do not accept referral
  - Bhandari et al Lancet India 1996 76%
  - Bang et al India, Lancet 1999 98%
  - Baqui et al Bangladesh Lancet 2008 68%
  - Zaidi et al Pakistan PIDJ 2012 78%
  - Baqui et al SATT Bangladesh Lancet GH 2014 84%
  - DR Congo, AFRINEST, Lancet 2014 71%
  - Kenya AFRINEST, Lancet 2014 89%
  - Nigeria AFRINEST, Lancet 2014 78%
AIM:

- To find deliverable and effective treatment for newborns with signs of severe infection where referral is not possible
Research in programme settings

1: Home based care
- Facility births
- Home births
- Home care

WHO-UNICEF training package for CHWs/CHEWs
- Pregnancy surveillance (two visits),
- Find births, make postnatal home visits to:
  - identify signs of illness in newborns & young infants
  - empower families to identify signs of illness and promote care seeking

2: Outpatient care
- Sick young infants seen by trained health workers
- Possible Serious Bacterial Infection (PSBI)
- Referral not accepted
- Referral to hospital accepted

WHO-UNICEF IMCI assessment and management by study nurses or clinical officers

Continued on next slide
Referral not accepted

Classified into:

- Clinical severe infection
- Fast breathing only

If consent obtained, enrolled and randomized to receive reference or simplified antibiotic regimens on outpatient basis

Physicians/Nurses – Outpatient management

Critically ill

Referred again to hospital
If refused again, given reference regimen and followed up

3: Simplified treatment regimens
Participants

Young infants with clinical signs of severe infection whose parents do not or cannot accept hospital referral

**INCLUSION SIGNS:**
- Stopped feeding well
- Movement only when stimulated
- Severe chest in-drawing
- Temperature ≥38.0°C
- Temperature <35.5°C

**EXCLUSION SIGNS:**
- Unconscious
- Convulsions
- Apnoea
- Unable to feed
- Unable to cry
- Persistent vomiting
- Major bleeding
- Cyanosis
- Bulging fontanel
- Weight <1500 grams
- Major congenital malformation
- Surgical conditions requiring hospitalization
Fast breathing only: Intervention and Control

Control arm (reference treatment)

A: IM gentamicin and procaine penicillin OD for 7 days

14 injections

Simpler regimens

E: Oral amoxicillin BD for 7 days

No injections

Outpatient treatment by health workers (CHEWs, nurses, physicians)

Procaine penicillin 50,000 units/kg once daily IM; gentamicin 4.0-7.5 mg/kg/day once daily IM; oral amoxicillin suspension 75-100 mg/kg/day
Severe Clinical infection: Intervention and Control

Control arm (reference treatment)

A: IM gentamicin and procaine penicillin OD for 7 days
   14 injections

Simpler regimens

B: IM gentamicin OD and oral amoxicillin BD for 7 days
   7 injections

C: IM gentamicin OD and procaine penicillin OD for 2 days, thereafter oral amoxicillin BD for 5 days
   4 injections

D: IM gentamicin OD and oral amoxicillin BD for 2 days, thereafter oral amoxicillin BD for 5 days
   2 injections

Outpatient treatment by health workers (CHEWs, nurses, physicians)

Procaine penicillin 50,000 units/kg once daily IM; gentamicin 4.0-7.5 mg/kg/day once daily IM; oral amoxicillin suspension 75-100 mg/kg/day
Outcomes

Primary outcome: Treatment failure within 7 days of randomization

- Death or severe adverse event due to study antibiotics
- Clinical deterioration: emergence of any sign of critical illness, a (new) sign of severe infection, hospitalization
- Persistence: no improvement by day 4, not fully recovered by day 8

Secondary outcomes

- Death within 2 weeks after enrolment
- Relapse during the second week

Those who failed treatment were given ceftriaxone injections for 7 days

Multi-country, multi-centre study in Africa, two additional studies in Asia: large sample size, high generalizability
AFRINEST - Fast breathing results
Infants with fast breathing (n=2485)

Mild illness (n=7487), taken to hospital (n=318), severe clinical infection (n=2121), critically ill (n=186)

Infants assessed by study nurse (n=12497: 5391 referred by CHW, 7106 came to clinic directly)

Infants with a danger sign identified by CHW/CHEW (n=7931)

Births identified by CHW/CHEW (n=70977)

Allocated to Injectable treatment (n=1170)

Allocated to oral treatment (n=1163)

Refused consent (n=38), other reasons (n=14)

Adequate treatment and assessment (n=1062)

Adequate treatment and assessment (n=1135)

The attached publication in English and French with some information about the guideline can be accessed on our website:

- ENGLISH - [http://apps.who.int/iris/bitstream/10665/181426/1/9789241509268_eng.pdf?ua=1](http://apps.who.int/iris/bitstream/10665/181426/1/9789241509268_eng.pdf?ua=1)
- FRENCH - [http://apps.who.int/iris/bitstream/10665/205563/1/9789242509267_fre.pdf?ua=1](http://apps.who.int/iris/bitstream/10665/205563/1/9789242509267_fre.pdf?ua=1)
Overall context

- This guideline is for low resource settings in the context of primary health care only where referral is not possible.

- The treatment guideline is for use by professionally trained health workers, and not for lay community health workers.

- The health workers should be appropriately trained, supplied with necessary equipment and medicines and supervised for the identification of signs of illness, referral, treatment if referral is not accepted and close follow up.

- Monitoring of the programme is essential for ensuring high quality of identification, treatment and follow up activities.

- These guidelines are expected to rationalize the use of antibiotics for young infants with suspected infection.

- Surveillance for antimicrobial resistance should be strengthened in all countries.
Target audience

- National Policy-makers in health ministries
- Programme managers working in child health, essential drugs and health workers training
- Health care providers and clinicians managing sick children at various levels of health care including public and private
- Development partners providing financial and or technical support for child health programme
Objectives of the guideline

- Provide recommendations on the use of antibiotics for neonates and young infants (0-59 days old) with PSBI in order to reduce mortality rates

- Provide clinical guidance on use of simple antibiotic regimens that are both safe and effective for outpatient treatment of clinically severe infection and fast breathing pneumonia

- Provide programmatic guidance on the role of CHW and home visits in identifying signs of PSBI
**Postnatal Home visits by CHWs**

*unconscious, convulsions, inability to feed, inability to cry, apnoea, cyanosis, bulging fontanel, persistent vomiting, suspicion of meningitis*
Summary

- The guideline has the potential to increase access to treatment of PSBI in young infants

- The implementation of the guideline will:
  - contribute to the reduction of neonatal and young infant mortality
  - reduce inequity in access to care
  - provide an opportunity to improve home visits

- Needs to be implemented within the context of national health strategies, Every Newborn Action Plan and the available intervention packages – and **not as a vertical programme**

- Need for continuum of care at community, primary health care and referral facilities
Support to Country Implementation

- Training materials
- Joint Statement by various partners
- Guideline for Operationalizing management of sick young infants with PSBI where referral is not feasible in the context of existing maternal, newborn and child health programmes
- Technical support
